PROFILE

A curious and passionate Information Technology student that majors in Web Development. Throughout school and my projects, I have gained experience on creating websites, systems, and straightforward designs. I have worked with the languages of HTML, CSS, and JavaScript, as well for frameworks such as Angular and Vue.js. I enjoy whenever it comes on obtaining knowledge and experience, as well for trying out new ideas that will help me grow and improve both of my skills and projects. I am still growing and absorbing, open to learn more so I can be better at both designing and developing websites.

MAJOR PROJECTS

Tokyo Table (MEVN)

Full Stack Restaurant Web Application

Developed using the MEVN stack that has features such as the homepage, has a CRUD Functionality , and a display of menu. Users can comment and make reservations, and lastly, it is responsive.
